

Backend Engineer (m/f/x)

Permanent employee, Full-time · Headquarter Munich

ABOUT US

Carly's technology is changing the automotive world. With our products we offer car owners the world's best solutions to gain more control and transparency over their cars. Join our passionate team in Munich to make cars around the globe more connected!

Carly is the specialist for connected car solutions for car owners. Our use cases include car health, personalization and DIY/car service situations. Among other things, Carly enables car owners to uncover the depths of digital information hidden in their vehicles to create valuable insights and advantages for customers.

This creates an unprecedented level of transparency in the automotive world.

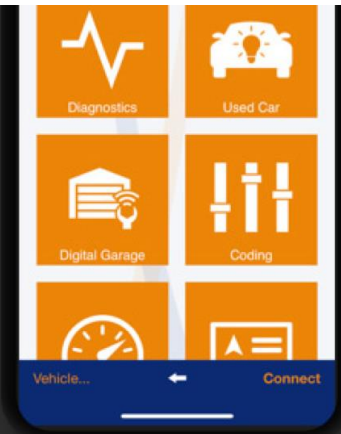

Our office is in the heart of Munich, filled with a highly driven and dedicated family-style team, near some of the giants in the automotive industry. From right there we are looking to change the industry towards more connectedness and transparency for consumers.

WHAT IS OUR GOAL?

We want to be the daily companion for all car enthusiasts worldwide for whom their car is more than just a mode of transportation. We combine deep car technology with consumer- and design-focused solutions to create the first international digital automotive brand, without even selling a single car.

Whether it's a problem with a vehicle, buying a used car, or just cool new features, we want everyone to get as much out of his or her vehicle as possible.

Be part of our driven team and conquer the automotive world with us!

Your mission as a Backend Engineer @ Carly is to work with product and technology teams to empower value-driven consumer solutions in the automotive world from a software backend point of view

RESPONSIBILITIES

- Lead the Carly backend architecture in terms of design, implementation and maintenance making sure that the server infrastructure, web APIs and databases enable, empower and enrich world-class applications
- Design, set up and maintain user database required for the web API
- Design, implement and maintain server communication between the Carly services and third-party service APIs
- Perform migration from current user data structure into the new required formats
- Ensure availability of services and migrate to automatic scaling/serverless structure if needed

REQUIREMENTS

- Excited to use state of the art development operations methodologies and scale fast
- Product- and consumer-oriented, ability to work in agile teams and setup agile working processes
- AWS or equivalent setup and configuration of server instances, Load Balancing, Routing and VPCs
- Developing web API (REST) with python-flask or equivalent
- Deployment of web applications inside docker containers or equivalent
- Proficiency in setting up and connecting database structures e.g. advanced mongoDB functionality such as automatic collection size limiting, document expiration and cluster compaction or equivalent

WHAT'S IN FOR YOU

- An entry to grow with our fast-scaling tech-startup with an already proven track record
- Join a stellar team of driven, successful entrepreneurs and software-experts
- A great opportunity to co-scale a fast-growing technology company with a focus on the consumer and great products
- Intense responsibility and power to shape the automotive industry and make an impact
- You will get an above-market competitive compensation
- Learn from the best in the business through expert sessions and exchange with our automotive and software team
- Learn to ship high value technology products in high-speed iterations
