

Senior Software Engineer (m/f/x)

Permanent employee, Full-time · Headquarter Munich

ABOUT US

Carly's technology is changing the automotive world. With our products we offer car owners the world's best solutions to gain more control and transparency over their cars. Join our passionate team in Munich to make cars around the globe more connected!

Carly is the specialist for connected car solutions for car owners. Our use cases include car health, personalization and DIY/car service situations. Among other things, Carly enables car owners to uncover the depths of digital information hidden in their vehicles to create valuable insights and advantages for customers.

This creates an unprecedented level of transparency in the automotive world.

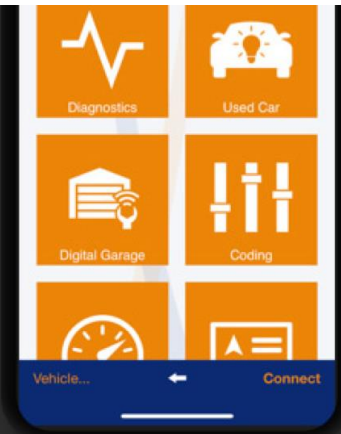

Our office is in the heart of Munich, filled with a highly driven and dedicated family-style team, near some of the giants in the automotive industry. From right there we are looking to change the industry towards more connectedness and transparency for consumers.

WHAT IS OUR GOAL?

We want to be the daily companion for all car enthusiasts worldwide for whom their car is more than just a mode of transportation. We combine deep car technology with consumer- and design-focused solutions to create the first international digital automotive brand, without even selling a single car.

Whether it's a problem with a vehicle, buying a used car, or just cool new features, we want everyone to get as much out of his or her vehicle as possible.

Be part of our driven team and conquer the automotive world with us!

Your mission as a Senior Software Engineer at Carly is to design and develop a car communication API, powering the Carly Applications, with a real impact for consumers around the world

RESPONSIBILITIES

- Work directly with one of the founders in a high focus team
- Implement and design various aspects of a software project (interpreter logic, file encryption/decryption, data file management)
- Implement client-side communication interface
- Develop high-quality software design and architecture
- Automate tasks through appropriate tools and scripting
- Plan, develop and implement large-scale projects from conception to completion
- Review and perform quality assurance for the completed software applications and features

REQUIREMENTS

- Several years of experience as a Software Developer with a high affinity and responsibility for quality and clean code including code reviews
- Profound knowledge of digital core technologies (e.g. data management, data analytics, integration, process automation, mobile, social, API Management, DevOps or cloud)
- Strong troubleshooting skills and ability to identify root cause with access to code
- Expert knowledge of at least one object-oriented programming language (especially C#) with the ability to pick up new languages and technologies quickly
- Knowledge of system and software development best practices and methodologies

WHAT'S IN FOR YOU

- An entry to grow with our fast-scaling tech-startup with an already proven track record
- Join a stellar team of driven, successful entrepreneurs and software-experts
- A great opportunity to co-scale a fast-growing technology company with a focus on the consumer and great products

- Intense responsibility and power to shape the automotive industry and make an impact
- You will get an above-market competitive compensation
- Learn from the best in the business through expert sessions and exchange with our automotive and software team
- Learn to ship high value technology products in high-speed iterations

Sounds intriguing to you? Find out if you are the right person to take on this challenge!
